

DRIVEN BY INNOVATION AND CUSTOMER SERVICE

New 21CS-EL Coating Stripper provides a “stringer” free tube end

Wauseon, OH - Wauseon Machine and Manufacturing has introduced a newly designed 21CS-EL Coating Stripper. It is an all Electric Rotary Endfinisher capable of removing coatings such as nylon from the tube O.D. in preparation for endforming. This machine is capable of providing a clean tube end with the benefit of not impacting the corrosion protective barrier coatings underneath. In addition, the coating removal head can be configured to provide a de-burring feature that eliminates the need for secondary operations after tube cut off. Also offers quick tool change and setups, independent tool close and position, no hydraulics, and very quiet operation.
